Immunomodulator Support Against Lumpy Skin Disease & FMD

Improved
Aurilum® Plus

BENEFITS:

- Reduces the spread and severity of symptoms as well as lesions
- Shortens the convalescence period by faster healing of lesions
- Helps to reduce the mortality rate

USAGE:

- Management of lumpy skin disease and FMD symptoms.
- Augments immunomodulator function and reduces the chances of secondary bacterial infections.
- Supports faster recovery in cases of PPR, BVD, BRD and Cow Pox virus affected animals.

RECOMMENDED SUPPLEMENTATION:

Cattle: 40 ml oral thrice daily for 4 to 5 days at 8 hourly interval
Calf: 10-20 ml oral thrice daily for 4 to 5 days at 8 hourly interval
Sheep/Goat: 5-10 ml oral thrice daily for 4 to 5 days at 8 hourly interval

Local Application-
Mix 20 ml of Aurilum® Plus with 130 ml of potable water to prepare 150 ml solution for topical use to achieve faster recovery and healing of lesions.

Preventive Supplementation :
Cattle : 6 ml oral twice daily
Calf/Sheep/Goat : 2 ml oral twice daily
Till epidemic is over from the area

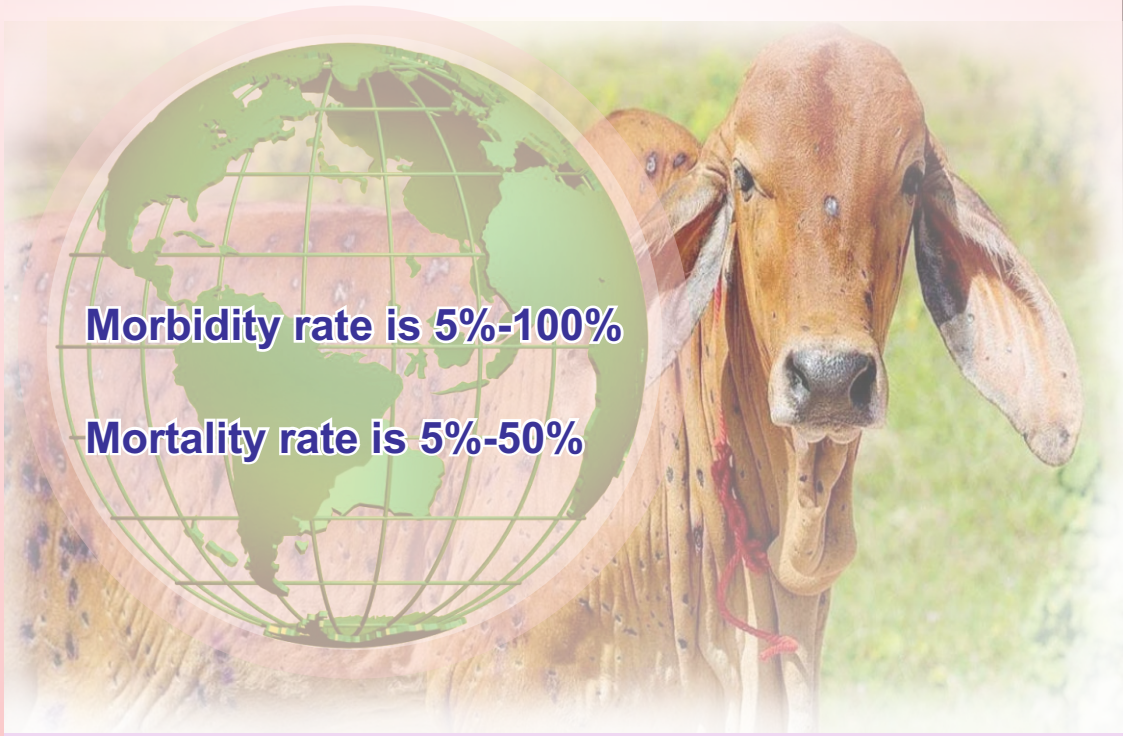

Pack Size
500 ml

Note: Urine/stool may appear blue or greenish blue in color, which is natural.

Lumpy Skin Disease, Foot & Mouth Disease and PPR

Causes Lesions, Reduces Productivity and May Lead to Death

Introducing 1st time in the World

Immunomodulator Support Against Lumpy Skin Disease & FMD

Improved

Aurilum® Plus

Aurilum® Plus is an advanced formulation to support the management of Lumpy Skin Disease, FMD and PPR

COMPOSITION:

Each ml contains:
Phytochemical extracts derived from:
Eugenia jambolana
Acacia arabica
Azadirachta indica
Enriched with Hemostatic agents & Methylene blue

MECHANISM OF ACTION:

1. Prevents and Controls Viral Infections

Methylene blue exhibits broad-spectrum antiviral effects by generating reactive oxygen species, interfering with viral DNA/RNA synthesis, and modulating immune responses

Eugenia jambolana, Acacia arabica, Azadirachta indica and Methylene blue helps to manage LSD and FMD by blocking viral replication, disrupting viral entry, and boosting immune response.

2. Immunomodulator

Eugenia jambolana works as an immunomodulator by activating key immune cells like macrophages and lymphocytes, which helps to strengthen the animal's natural defense system. This improved immune response enables the animal to recognize, attack, and clear the LSD & FMD virus more effectively, leading to faster recovery and reduced disease severity.

3. Anti-inflammatory & Antioxidant Effects:

Eugenia jambolana, Acacia arabica and Azadirachta indica help to reduce inflammation by lowering the production of inflammatory molecules, which eases fever, pain and swelling around the skin lesions. Their antioxidant properties neutralize harmful free radicals caused by the virus, protecting tissues from damage and promoting faster healing.

4. Wound Healer

Acacia arabica and Azadirachta indica promote wound healing by enhancing tissue regeneration, wound contraction, collagen formation, and re-epithelialization. Their phytoconstituents help reduce wound exudation and inflammation while supporting the repair of damaged skin, thereby accelerating the healing and closure of wounds.

Miraculous Efficacy

Immunomodulator Support Against Lumpy Skin Disease & FMD

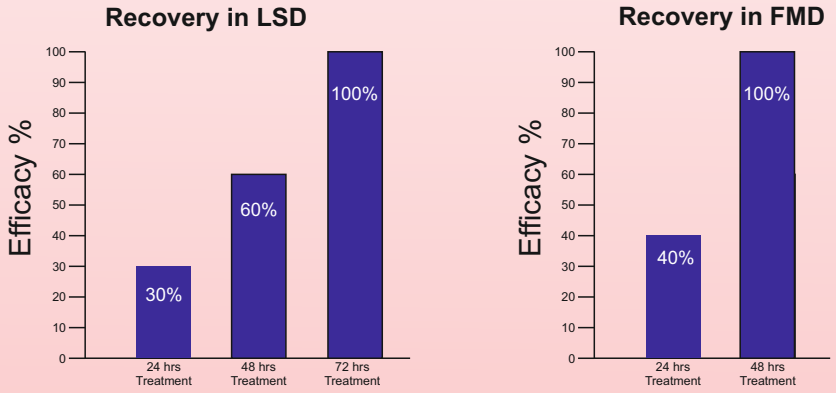

Improved

Aurilum® Plus

MECHANISM OF ACTION:

5. Broad Spectrum Antimicrobial Activity:

Azadirachta indica and methylene blue demonstrate broad-spectrum antimicrobial activity against various bacterial and fungal pathogens associated with damaged and ulcerated tissue. Azadirachta indica phytoconstituents exert antimicrobial effects by disrupting microbial growth and cellular functions, while methylene blue, particularly under light exposure, generates reactive oxygen species (ROS) that cause oxidative damage to microbial membranes, proteins, and nucleic acids. Their combined antimicrobial action may help reduce microbial colonization and secondary infections in wounds, thereby supporting a favourable environment for tissue repair.

Complete Healing of Lesions in 48 to 72 hrs

In a field observation on more than 50 dairy animals and goats showing signs associated with LSD, FMD, and PPR, supplementation of the nutritional formulation Aurilum Plus provided visible improvement in appetite, comfort, and overall well-being. Animals showed complete healing of lesions within 48 hrs in FMD and 72 hrs in LSD and PPR. The supplement was well tolerated, with no adverse reactions reported.
