

Powerful Antiviral Supplement

INDICATION

Prevention and Supportive therapy for RNA Virus Infections (Avian Influenza, Infectious Bronchitis, New Castle Disease and Fowl pox)

BENEFITS

- ✧ Prevents and controls bacterial, viral and fungal infections
- ✧ Increases Feed Conversion Ratio
- ✧ Reduces the mortality rate
- ✧ Improves immune health in broilers

RECOMMENDED USAGE

Broilers:

Therapeutic support

Chicks - 10 ml /100 birds
Grower – 20 ml/100 birds
Finisher – 30 ml/100 birds

Preventive use

Chicks- 2-2.5 ml /100 birds
Grower- 4-5 ml/100 birds
Finisher- 6-7.5 ml/100 birds

PACK SIZE

1 Ltr., 5 Ltr. and 50 Ltr. Container

Viral infections adversely affect poultry farms

- ✦ Reduces Growth and Development
- ✦ Increases Mortality
- ✦ Suppresses immune system

Powerful Antiviral Supplement

MetaBlu plus is an innovative formulation containing Eugenia jambolana, Acacia arabica and methylene blue nanoparticles with Antiviral, Antibacterial and Antifungal Activity for birds and animals

COMPOSITION

Each ml contains:

Phytochemical extracts derived from
Eugenia jambolana extract
Acacia arabica extract
Enriched with Methylene blue

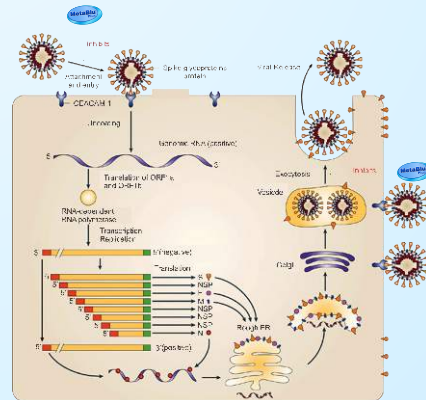

1000 mg
200 mg

MODE OF ACTION

Antiviral Activity

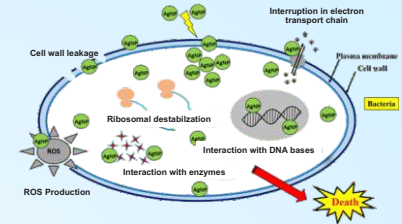

MetaBlu plus interferes with the lipid envelope that surrounds some viruses and prevent the virus from entering host cells and initiating infection.

MetaBlu plus interferes with the replication of viral genetic material, disrupting viral replication cycle and helps to reduce the spread of viral infections within poultry flocks.

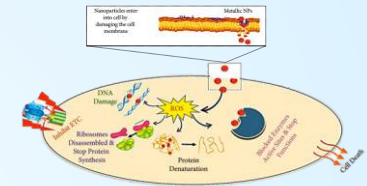

Antibacterial Activity

Metblu plus binds to bacterial DNA, interfering with DNA replication and transcription processes. This interference can disrupt essential bacterial functions and lead to bacterial death.

Antifungal Activity

Metblu plus binds to bacterial DNA, interfering with DNA replication and transcription processes. This interference can disrupt essential bacterial functions and lead to bacterial death.

Antioxidant Activity

MetaBlu plus contains antioxidants can protect cells from oxidative stress caused by viral infections. This protection can help maintain cellular integrity and function, which is crucial for the immune system to mount an effective response.

Anti inflammatory Activity

Infections often trigger inflammatory responses in the body and possess anti-inflammatory properties, which can helps to reduce inflammation associated with infections. This may contribute to alleviating symptoms and supporting the immune response.

Immunomodulator

MetaBlu plus modulates the immune response. A strengthened immune system defends against infections by enhancing the body's natural defense mechanisms, such as increasing the activity of immune cells (e.g., macrophages, natural killer cells).

Support against RNA Virus Infections
